## US Army Corps has scheduled drilling activities in the City of Santa Clarita

The planned drilling activities are part of the US Army Corps' Eastern Santa Clara Subbasin Groundwater Study. The project is being performed in cooperation with the Castaic Lake Water Agency, with oversight by the California Department of Toxic Substances Control. A total of 30 borings are planned to study the quality of groundwater in the Santa Clarita area. The proposed drilling locations have been identified on the figure below.

The entire drilling program is expected to take 3-4 weeks, working time will not exceed 3 days at any one site. Drilling activities will be performed during daylight hours only. Drilling may be noisy at times, and vehicle and pedestrian traffic may be rerouted temporarily. The US Army Corps and its contractor are working with the City of Santa Clarita to minimize inconvenience to residents. If you have questions or concerns please contact Mr. Larry Sievers, US Army Corps Project Manager at 213-452-3989, or Ms. Mary Lou Cotton, Castaic Lake Water Agency at 661-297-1600. The City of Santa Clarita project coordinator is Ms. Kerry Breyer, 661-255-4984.
